## Jill's Corner

**Jill Olmstead, Managing Director and Health Consulting Lead**

**Welcome to FY21!** After a very busy proposal season, it feels good to get into the groove of a new (fiscal) year with new projects and pursuits and new opportunities to grow. FY21 promises to be an exciting year. The election, regardless of outcome, promises changes in our health clients and new opportunities to support the health mission. While the pandemic remains a challenge, COVID has been a catalyst for many positive changes in the health ecosystem. Many of these changes and the opportunity to continue the evolution in health are outlined in our new Future of Federal Health: Lessons from COVID-19. Please check it out in The Pulse and share it on social media with your thoughts. Together, we can help our clients make positive changes to thrive during the pandemic and beyond!

## We Won!

Celebrating Health Wins

**AFS has been awarded a new 3-year contract to expand the services we provide to the Food and Drug Administration's (FDA) Center for Devices and Radiological Health (CDRH).**

CDRH is committed to providing patients and providers with access to safe, effective, and high-quality medical devices and safe radiation-emitting products. This contract focuses on further streamlining the business processes that support premarket reviews, post-market surveillance, and compliance activities and to develop a formal program to foster a culture of continuous improvement and innovation. Deal size is TCR \$2M, TDP \$6.4M. Congratulations to Dave Casper, Tara Raju, Aubrey Maslen, Scott Bonney, Doug Kelly and the rest of the FDA Team for this exciting win.

**AFS has been awarded a seat on a new 5 year BPA contract to support and improve performance for the strategic planning, business process, organizational alignment, performance measurement, communication, and training activities across all financial management tools and systems for the Food and Drug Administration (FDA).**

The Business Transformation Team (BTT) BPA will position the FDA to be adequately prepared in implementing Government-wide initiatives while being more responsive and effective in its support of mission-based services. The BPA has a ceiling value of \$322M. We anticipate the first task order will be in support of FDA's Office of Finance, Budget and Acquisitions (OFBA), and will include MC-related services to include business process improvement, policy support, strategic planning, continuity of operations and a full slate of human capital offerings.

We have several additional demand generation opportunities qualified as well, including supply chain, HR transformation, and procurement automation initiatives. Thanks to all who supported this landmark win, including Orlena, Keyatta R., Kelly Jr, Douglas F., Lattimer, Todd, BurberryMartin, Grace, Andrew Daniel and the "Odd Pod" in the Digital Studio, Scott Quehl, LaJoie, Shirley F., Peter Brason, Jeff Miller and many others.

## Deal in the Works

### CDC World Trade Center Health Program Project

CDC's World Trade Center Health Program provides care to first responders and survivors of the 9/11 attacks. While more than 19 years have passed since the attacks, the program and the care it delivers are more important than ever, as the responders and survivors require care for cancers, acute traumas, and aerodigestive disorders. This important program now needs help modernizing its processes and systems. After completing our proposal with a cross-disciplinary team, Accenture was invited to orals and delivered a great presentation that not only showed off our tremendous capabilities, but our passion for the program. An award decision won't be made until December, but we're keeping our fingers and toes crossed!

### Defining the future of health: Lessons from COVID-19

A federal government perspective

Healthcare is in the midst of a major, industry-wide transformation. Today outcomes matter most, and digital technologies are empowering healthcare stakeholders to deliver them.

**Learn more about Accenture's view on the future of health in our new report: Defining the future of health: Lessons from COVID-19. #FederalHealth #Health #COVID19**

**Help us promote this report by sharing it on LinkedIn!**

### Suggested LinkedIn Post:

"In the race to find a COVID-19 vaccine, organizations across the health ecosystem are barriers to sharing and analyzing data. Learn more about how the pandemic is accelerating change and collaboration for federal health."
